Samjho · Fonts, colour, components · v1

Calm and clear, in the patient's own language.

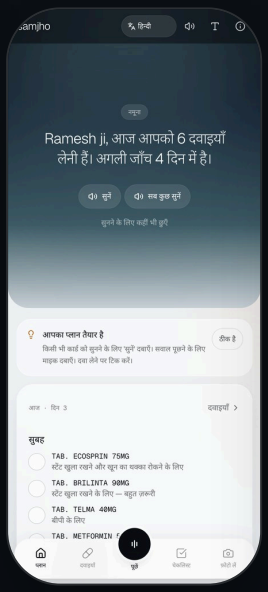

11

10 scripts · 1 font stack

Languages Samjho explains and reads aloud in. Every colour, typeface and component in this guide exists to help a patient follow their discharge paper at home.

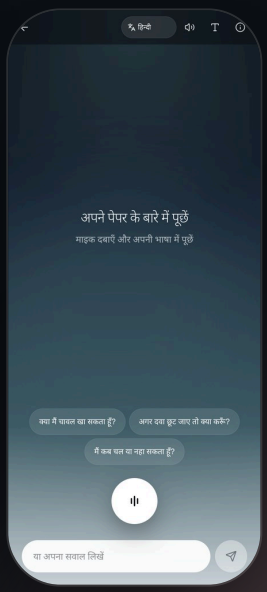

WELCOME

PLAN

MEDICINES

ASK

What it is

The shared visual language of Samjho: a night-to-dusk palette, Geist set light, and frosted-glass surfaces, all defined once in `app/globals.css`.

What's inside

Foundations · Colour · Typography · Scripts · Layout and surfaces · Controls · Containers · Navigation and context · Icons, motion and rules

Built for a tired patient, not a power user.

People open Samjho right after a hospital stay. Many are older, many read Hindi or Tamil before English, and all of them have a paper full of drug names they need to act on. The design system keeps that moment calm and readable.

3

PRINCIPLES, IN ORDER

Calm before clever

Dark hero, light reading surfaces, light type weights, slow easing. Nothing flashes and nothing is bold.

Every language first-class

Eleven languages, ten scripts, one font stack. Layouts are checked with long Indic strings, not just English.

One phone, everywhere

A single 440px column. On a laptop it sits inside an iPhone frame, so a demo looks like the real thing.

How the system is wired

TOKENS · GLOBALS.CSS

`@theme inline` colours and font stacks, gradients, glass classes, keyframes

→

UTILITIES · TAILWIND V4

`bg-night` `text-ink/70` `font-mono` `ring-white/15`

→

COMPONENTS · UI.TSX

Card, TopBar, MicFab, ListenButton, TickBox and friends, each with a `dark` prop

Where it lives

`app/globals.css`
Tokens, font stacks, gradients, glass, keyframes, device frame

`app/layout.tsx`
Loads Geist, Geist Mono and nine Noto Sans scripts

`components/ui.tsx`
TopBar, Card, Label, ListenButton, TickBox, MicFab

`components/Onboarding.tsx`
OnboardingFrame, `glass` and `primaryBtn`

`components/SlideToConfirm.tsx`
Drag to mark doses taken

`components/DeviceFrame.tsx`
iPhone mockup on screens 1024px and wider

SURFACES

Each page is either night or paper. Shared components take a `dark` prop to match.

ACCESSIBILITY

Large text lifts the root from 16px to 19px. Focus rings are peach. Motion stops for reduced-motion users.

THE RULE ON RED

Alert red means danger to the patient. Nothing else in the app is red.

Night to dusk, in ten tokens.

The palette follows the hero gradient: cool night blue through teal into warm dusk. Two status colours sit outside that arc and are kept for meaning. Use them as Tailwind utilities with opacity modifiers, never as raw hex.

NIGHT TONES · STRUCTURE

night	slate	teal	mist
#0B0F14	#1C2A3A	#3E5C66	#C9D1D6
App background, dark pages, slide track. Also `theme-color`.	Gradient mid-tone and desktop backdrop glow.	Brand cool accent: ambient blobs, the Ask orb, hero glow.	Last stop of the hero gradient, where night meets paper.

DUSK ACCENTS · WARMTH

peach	rose
#E8B79A	#C98E8E
Focus ring, eyebrow accents, warm blobs, dusk cards.	

NEUTRALS · READING

paper	ink
#EEF1F3	#0B0F14
Plan, medicines and checklist sit on paper; text is ink.	

STATUS · MEANING

alert	sage
#E5484D	#5E9C7D
Red for danger signs and 108. Sage for doses taken.	

Gradients

`.hero-gradient`
Night → slate → teal → mist, with a teal glow on top. Plan hero.

`.dusk-gradient`
Slate → teal → rose → peach at 160°. Follow-up card.

`.bg-paper`
Paper with peach, teal and rose washes so glass has colour to blur.

Text opacity ladder

100	Tab. Ecosprin 75mg · headings, key values
70	Take one after breakfast · body
55	From your paper, line 4 · secondary
40	Medicines · hints, idle tabs

100	Your plan is ready · headings
80	Every medicine, explained · body
55	Nothing is stored · secondary
45	Sarvam AI · labels, idle tabs

One family, set light.

Geist carries the whole interface. Display sizes use weight 200 or 300, body text 400, and hierarchy comes from size rather than bold. Geist Mono appears only in small uppercase labels and drug names.

GEIST · 200

GEIST MONO · DRUG NAMES

MORNING · DAY 3

GEIST MONO · EYEBROW, 0.14EM

Type scale

Specimen at actual size	Style	Size	Weight · leading	Used on
4 days	Stat	3rem	200 · none	Follow-up count
samjho	Hero	2.2rem	200 · tight	Welcome
6 medicines today	Plan title	1.6rem	300 · snug	Plan hero
Your medicines	Page title	1.5rem	300 · tight	Every page head
What does Brilinta do?	Section	1.3rem	300–500 · snug	Ask answers, Reading
Take one tablet after breakfast.	Body L	0.95rem	400 · normal	Main copy, buttons
Keeps the stent open and stops clots.	Body	0.85rem	400 · normal	Card copy, rows
Samjho explains your paper. It does not replace your doctor.	Small	0.78rem	400 · relaxed	Disclaimer, meta
NEXT CHECK-UP	Eyebrow	0.68rem	Mono · 0.14em	`Label`
Medicines	Tab	0.62rem	400	Bottom tab bar

All sizes are rem, so the Large text toggle (16px → 19px root) scales every row together.

Eleven languages, one font stack.

Hindi and Marathi share Devanagari, so eleven languages need ten scripts. Each Indic script falls through to its own Noto Sans family at weights 300–600, loaded with `display: swap` and not preloaded.

10
SCRIPTS, ONE STACK

The fallback chain

The browser walks `--font-sans` left to right and uses the first family that has the glyph. `--font-mono` is the same chain with Geist Mono first.

Geist › Noto Devanagari › Bengali › Gujarati › Gurmukhi › Kannada › Malayalam › Oriya › Tamil › Telugu › system-ui

Track Latin only

× स्टेंट खुला रखने

✓ स्टेंट खुला रखने

Letter-spacing pulls Indic conjuncts apart. When `lang` is not `en-IN`, `.font-mono` tracking is reset to 0.

Large text

Take one tablet after food 16PX

Take one tablet after food 19PX

The T button in TopBar sets `html[data-large="1"]`, raising the root to 19px.

A 440px column of glass.

Everything lives in one centred column, capped at 440px. Shapes are pills and large-radius cards; depth comes from translucent white over soft colour, not from heavy shadows.

Spacing

4px		Icon to label
8px		`gap-2` default
12px		`gap-3` rows
16px		Gutter, card stack
20px		Card padding
32px		Section break
128px		Clears the tab bar

Corner radius

`full`

Glass surfaces

On paper `.bg-paper`

On night `bg-night + teal blob`

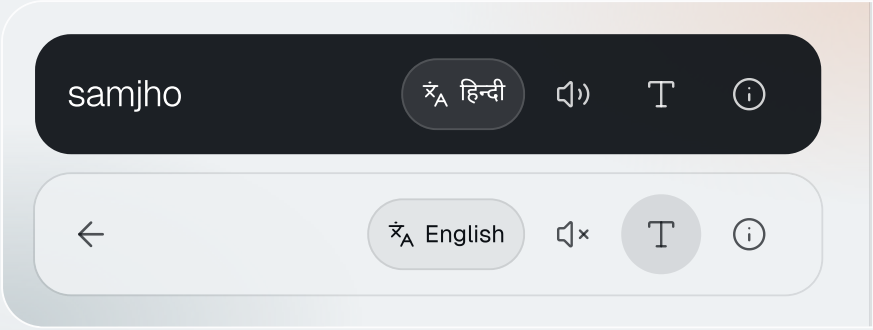

Glass needs colour behind it. On light pages that is the `.bg-paper` wash; on dark pages it is a blurred teal or rose blob. The orb uses `.glass-orb`: a radial teal → slate → night with an inner shine.

Breakpoints

Viewport	Behaviour
Under 640px	The plain app on a night background; the phone is the device
640px and wider	Slate and teal radial glows appear behind the 440px column
1024px wide and 600px tall	The app renders inside an iPhone mockup (393 × 852 screen), scaled to fit. /sample-paper is exempt
Print	White background, 13px root, `.no-print` hidden and `.print-only` shown

Small set, two skins.

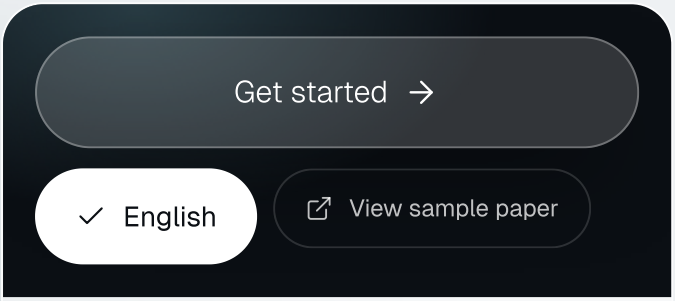

Every shared control has a light and a dark version, picked with a `dark` prop. All are shown at actual app size. Tap targets are at least 40px.

TopBar

`components/ui.tsx`

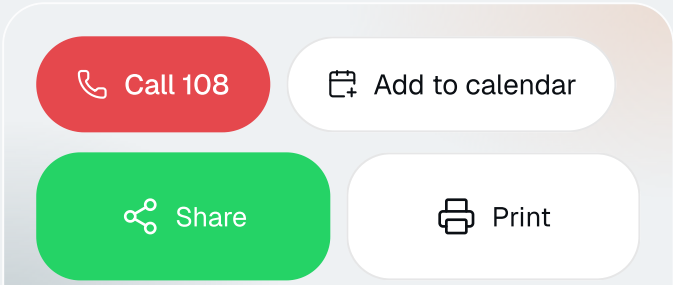

Sticky, blurred night/60 or paper/80. Wordmark or back arrow left; language, mute, large text and info right. Shown: dark home; light with back, muted, large text on.

Buttons on night

`Onboarding.tsx`

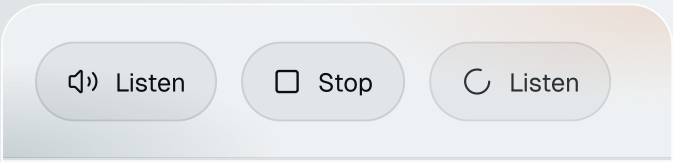

`primaryBtn` : 56px glass pill, light 0.95rem. Solid white for selected, ring-only for minor actions.

Buttons on paper

`app/plan`

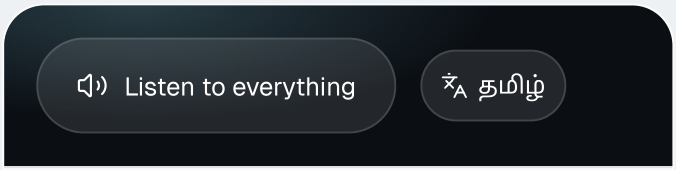

Danger is the only filled colour button. Share uses WhatsApp green #25D366 by design.

ListenButton

`ui.tsx`

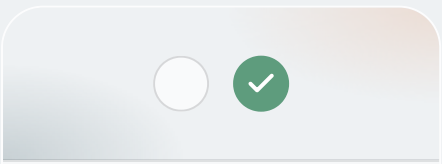

Idle, playing, loading. 40px pill (48px with `big`). Reads the card aloud through Sarvam TTS.

Listen big · LanguagePill

`ui.tsx`

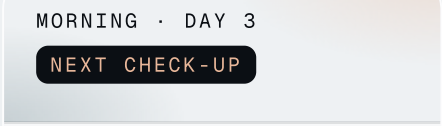

On dark pages both switch to white/10 fill with a white/15 ring. The pill lists each language in its own script.

TickBox

`ui.tsx`

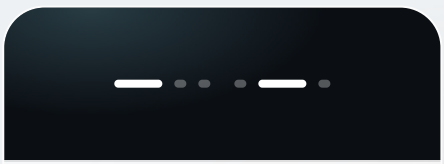

28px circle; checked is sage.

Label

`ui.tsx`

Mono 0.68rem, uppercase, 0.14em.

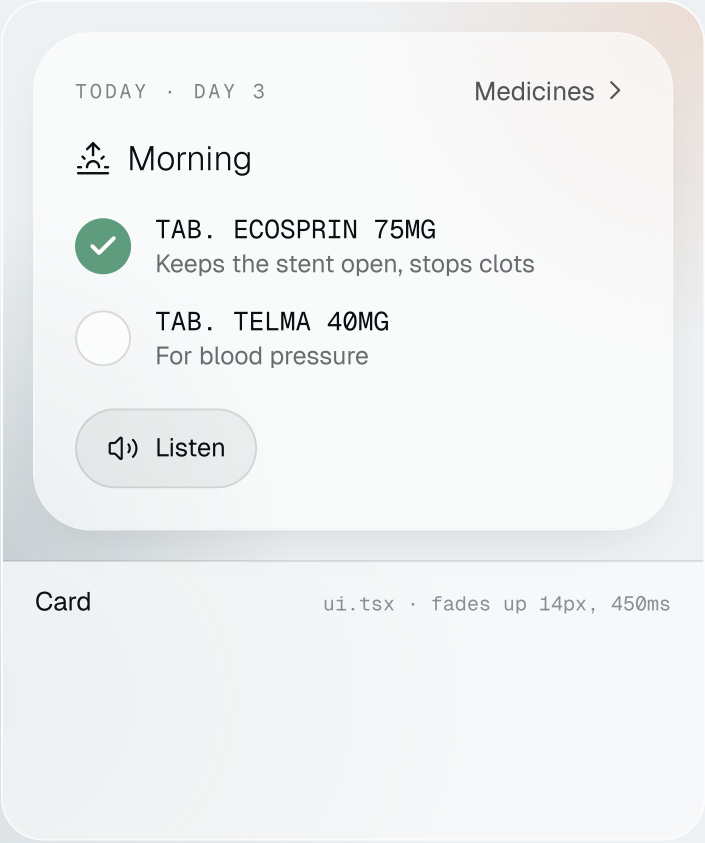

Step dots

`Onboarding.tsx`

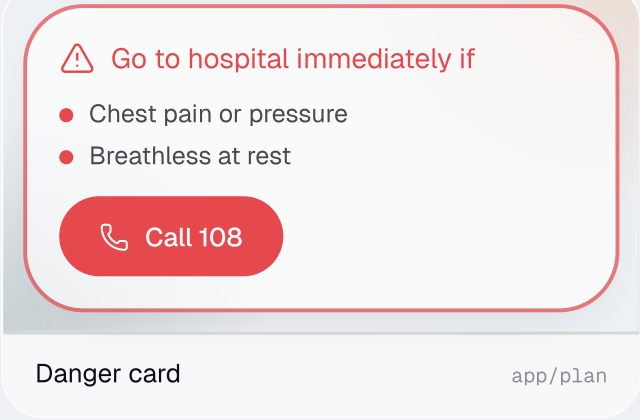

Active step stretches to 24px.

Cards hold the plan.

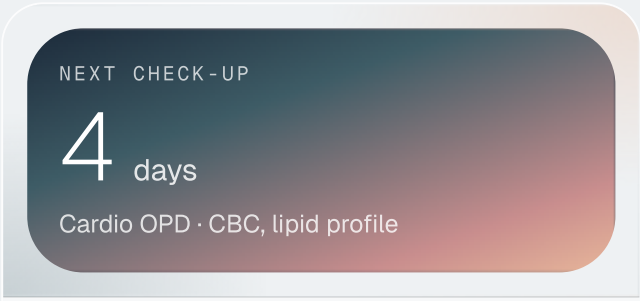

Content is grouped into 28px cards that fade up as they scroll into view. Status lives inside them: red for danger, dusk for what comes next, sage for done.

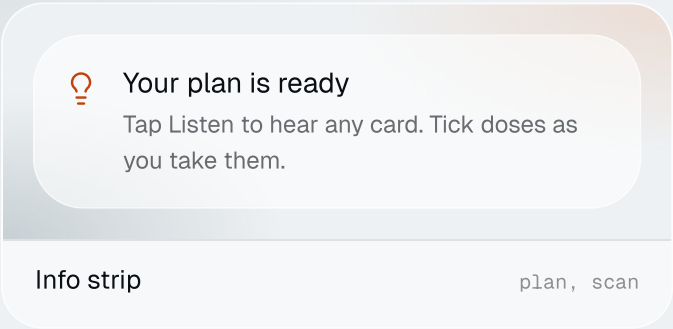

Card — ui.tsx · fades up 14px, 450ms

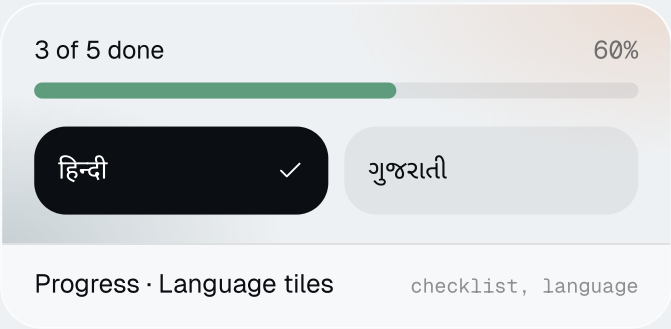

Danger card — app/plan

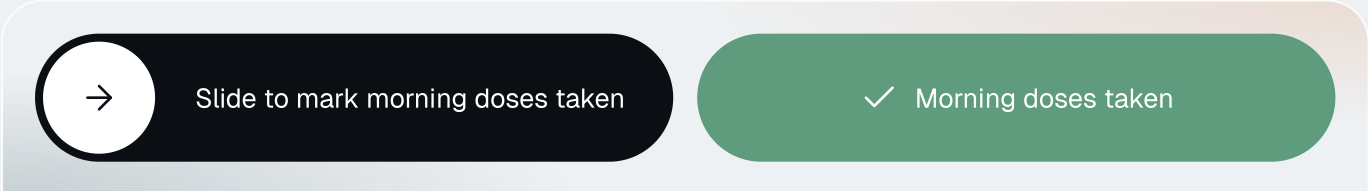

Follow-up card — .dusk-gradient

Info strip — plan, scan

Progress · Language tiles — checklist, language

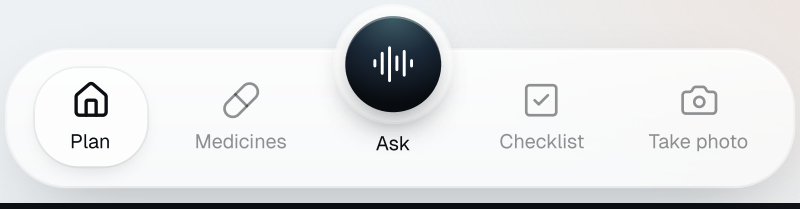

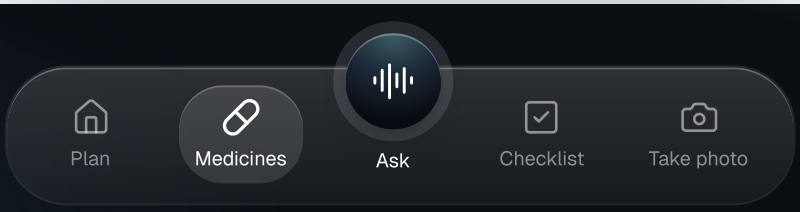

SlideToConfirm — components/SlideToConfirm.tsx

64px night track, 56px white thumb. Past 75% confirms; otherwise it springs back. Done turns sage.

One tab bar, the same parts on every screen.

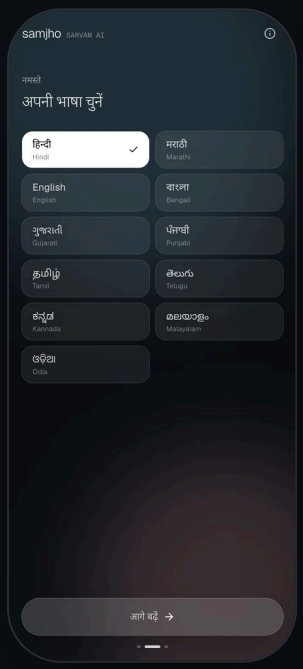

A floating glass tab bar keeps the five main places and the voice button one tap away. Onboarding runs on night; reading pages run on paper with a night hero.

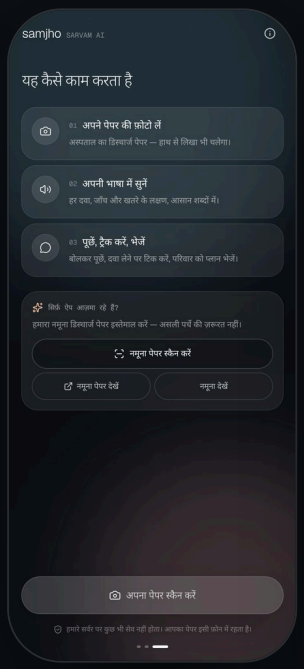

MicFab · bottom tab bar `components/ui.tsx`

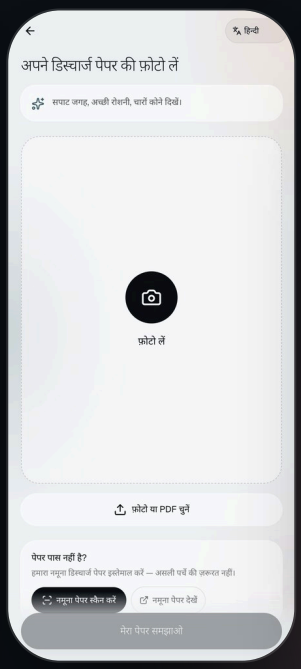

68px `.glass-light` / `.glass-dark` bar, 30px radius. Active tab sits in a glass pill; Ask is a raised 58px ring around `.glass-orb`.

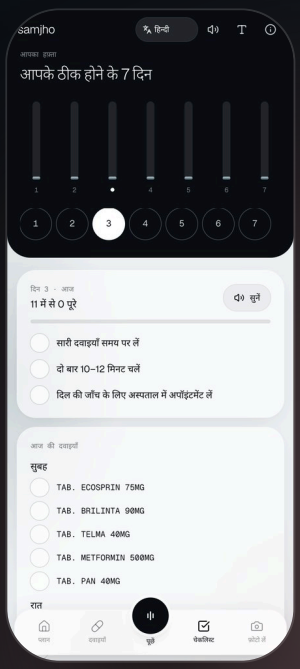

LANGUAGE · NIGHT

GUIDE · NIGHT

SCAN · PAPER

CHECKLIST · PAPER

NIGHT PAGES

Welcome, Language, Guide, Ask. Teal and rose blobs drift behind glass panels.

PAPER PAGES

Plan, Medicines, Checklist, Scan. A night hero melts into paper via `.hero-gradient`.

SHARED

TopBar, Card, ListenButton, TickBox and the tab bar, switched with one `dark` prop.

Thin lines, slow easing, few exceptions.

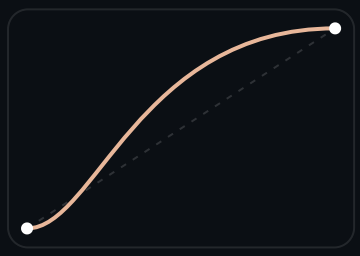

Icons are Lucide at a 1.6 stroke, so they sit as lightly as the type. Motion is eased out and gentle, and switches off entirely when the system asks for reduced motion.

Camera · Volume2 · Pill · CheckSquare · Home · Languages · Phone · Alert

Sunrise · Sun · Sunset · Moon · Message · ShieldCheck · Sparkles · Waveform*

16px inline · 18px in headers · 20px in the tab bar · 22–24px in the orb. Stroke 1.6, 2 for the active tab, 3 for the TickBox check. *Waveform is a custom three-bar SVG in ui.tsx.

CARD EASE

`cubic-bezier(0.22, 1, 0.36, 1)`

Fast start, long soft landing.

Motion	Spec	Where
Card reveal	Opacity 0 → 1, y 14 → 0, 450ms, once in view	`Card`
Page intro	Fade and rise 10–16px over 600–800ms; list items 100ms apart	Onboarding
`drift`	14s loop, translate ±6%, scale 1 → 1.12	Ambient blobs
`breathe`	1.6s pulse, scale 1 → 1.35 while fading out	Listening ring
Tick	Spring, stiffness 500, damping 18	`TickBox`
Press	`active:scale-95`, 0.97 on tiles, 0.98 on wide buttons	All buttons

DO

- Use tokens (`bg-night` , `text-ink/70`), never raw hex.
- Size text in rem so Large text scales it.
- Pick night or paper per page and pass `dark` to match.
- Keep red for danger and sage for done.
- Label every icon-only button; keep targets 40px or more.
- Test new copy in a long Indic language.

DON'T

- Add letter-spacing to text that may render in Indic.
- Use bold for hierarchy. Use size and light weights.
- Put glass on a flat colour; it needs a wash or blob behind it.
- Invent new radii beyond full, 30, 28, 24, 22 and 16px.
- Carry meaning in motion; it is off for reduced-motion users.
- Remove the peach `:focus-visible` ring.
